

WARNING: Cycling can be dangerous. Bicycle products should be installed and serviced by a professional mechanic. Never modify your bicycle or accessories. Read and follow all product instructions and warnings including information on the manufacturer's website. Inspect your bicycle before every ride. Always wear a helmet and use lights at night. Failure to heed any of these warnings may result in serious injury or death.

STUFF YOU NEED:

- A frame with a $\text{Ø}28.6/31.8\text{mm}$ seat tube
- A drivetrain with a 7–11-speed chain

TOOLS:

- 4mm hex wrench
- 2.5mm hex wrench
- Torque wrench

INSTALLATION:

1. Open up the clamp and place the ChainSpy on the seat tube (for 28.6mm tubes, use the included shims). Loosely snug the clamp bolt with a 4mm hex wrench (fig 1).
2. Loosen the slider bolt and position the chain cradle over the chain. When it's in place, loosely secure the slider bolt (fig 2).
3. You will probably have to adjust the clamp up and down as well as the side-to-side position to get the ChainSpy in just the right place. Be sure to run through all of your rear gears to ensure the chain doesn't rub on the sides (fig 3). Adjust the ChainSpy height by moving the clamp up and down. You can also make adjustments by rotating the slider fore and aft (fig 4).
4. When the ChainSpy is in place, torque the clamp and slider bolts 3–5 Nm.
